١. رؤية البرنامج

رؤى قسم علم الأرض:

• الريادة والتميز في تخصصات علوم الارض ورفد سوق العمل بكفاءات علمية تتناغم مع التطورات التقنية والمعرفة الحديثه.

٢. رسالة البرنامج

رسالة قسم علم الارض:

تتمثل رسالة البرنامج الاكاديمي لقسم علم الارض في تجهيز خريجين محترفين قادرين على البحث العلمي في مجالات علوم الأرض و بما يتوافق مع متطلبات سوق العمل وتخريج متخصصين ذوي قدرة وكفاءة يمتازون بالمهنية العالية والقدرة على القيادة والعمل الجماعي من خلال تزويدهم بالمعرفة والمهارات اللازمة وبما يحقق خدمة المجتمع فضلا عن تحضير واعداد جيولوجيين يمتازون بمستوى عال من التعليم وبما يحقق تكاملا مابين المعرفة النظرية والتطبيقية ضمن مفهوم التنمية المستدامة وبما يحقق الرؤية الوطنية.

٣. اهداف البرنامج

اهداف قسم علم الأرض:

يمكن ايجاز أهداف البرنامج الاكاديمي لقسم علم الارض في النقاط التالية:

- اعداد خريجين قادرون على مواكبة التطورات المحلية والعالمية وبما يتلائم مع سوق العمل.
- ٢. تبني طرائق التدريس الحديثة والمعاصرة لتحقيق الاهداف التعليميه المنشودة مثل استخدام طرق العصف الذهني والتعليم المتمايز والتغذية الراجعة وبما ينمى التفكير الابداعى لدى الطالب.
 - ٣. التشجيع على صقل وتطوير المهارات والمواهب اللاصفية لدى الطلبة فضلا عن تشجيع العمل التطوعي والجماعي.
 - ٤. تطوير وتحديث مناهج الدراسات الاولية والعليا لمختلف تخصصات علم الارض لمواكبة معايير التنافس العالمي.
- و. تشجيع البحث العلمي ودعمه ولمختلف تخصصات الجيولوجيا ونشر النتاجات العلمية ضمن المستوعبات العالمية الرصينة فضلا عن تسويق البحوث التطبيقية.
 - ٦. الارتقاء بقسم علم الارض من خلال الحصول على الاعتماد الاكاديمي البرامجي التخصصي.
 - ٧. اقامه الندوات والمؤتمرات العلمية والأنشطة العلمية الأخرى في القسم وبشكل دوري لزيادة ثقة طلبة الدراسات الاوليه والعليا
 باختصاصهم واطلاعهم بأهميته في ضوء اهتمام المؤسسات العلمية المتخصصة بهذا التخصص.
 - ٨. توفير فرص التدريب الحقلي من خلال السفرات الحقليه للطلبة مع اساتذتهم وتعريف الطلبة بأماكن عملهم في المؤسسات من خلال التدريب الصيفي في الموسسات الحكومية وبما يحقق مفهوم الشراكة والتعاون مع مؤسسات الدولة.
 - ٩. تشجيع التعاون الاكاديمي لتخصصات علم الأرض مع مجالات أخرى مثل الفيزياء، الكيمياء، وعلم الأحياء، والطب والعلوم البيئية والفلك والهندسة مما يساهم في تطوير أبحاث متعددة التخصصات تصب في خدمة المجتمع.

٤. الاعتماد البرامجي

يعمل قسم علم الأرض حالياً على استكمال متطلبات الاعتماد البرامجي وفق معايير وزارة التعليم العالي والبحث العلمي في العراق،
وبالتنسيق مع وحدة ضمان الجودة والأداء الجامعي في كلية العلوم، جامعة بغداد. ويسعى القسم إلى تطوير خططه الدراسية، وتحديث
مناهجه الأكاديمية، وتعزيز إمكانياته البحثية والتعليمية بما يتوافق مع معايير الاعتماد الوطني والعالمي، وذلك بهدف تحقيق التميز
الأكاديمي وضمان جودة التعليم بما يخدم سوق العمل ومتطلبات التنمية المستدامة.

المؤثرات الخارجية الاخرى

• تدریب صیفی، زیارات میدانیة، دورات تدریبیة، بحوث علمیة، مختبرات، مکتبة، سفرات حقلیة.

٦. هيكلية البرنامج

				<u> </u>
ملاحظات*	النسبة المئوية	وحدة در اسية	عدد المقررات	هيكل البرنامج

			ة للبرنامج	٨. مخرجات التعلم المتوقعاً

الاهداف المعرفية

بيان نتائج التعلم:

- إكساب الطالب المعرفة العلمية المتعمقة في نظريات نشأة الأرض، وتطورها، وتركيبها الداخلي، والعمليات الجيولوجية مثل التكتونية، البركانية، والرسوبية.
 - فهم العلاقة بين الظواهر الجيولوجية والزمن الجيولوجي، بما في ذلك القدرة على قراءة الخرائط الجيولوجية وتفسيرها.
 - تمكين الطالب من تحديد وتصنيف المعادن والصخور (النارية، الرسوبية، المتحولة) بناءً على خصائصها الفيزيائية والكيميائية، باستخدام الأدوات المخبرية والتقنيات التحليلية.
 - فهم عمليات تكوُّن الموارد الطبيعية (مثل النفط، المياه الجوفية، والخامات المعدنية) و آليات استدامتها.
- تحليل المشكلات البيئية مثل التلوث، التصحر، والكوارث الطبيعية (كالزلازل والفيضانات) من منظور جيولوجي.
- تطبيق المعرفة الجيولوجية في مجالات الاستكشاف الجيوفيزيائي، جيولوجيا النفط، والهندسة الجيوتقنية بما يخدم القطاعات الصناعية.
- إتقان استخدام الأدوات التكنولوجية الحديثة، مثل نظم المعلومات الجغرافية (GIS)، الاستشعار عن بُعد، والبرمجيات الجيولوجية، في جمع وتحليل البيانات
- تطبيق المنهج العلمي في إجراء البحوث الميدانية والمخبرية، وتحليل النتائج وتفسيرها وفق الأطر النظرية والعملية.

١- الفهم الشامل للنظريات الجيولوجية الأساسية

- ٢- تحليل الخصائص الفيزيائية والكيميائية للصخور
 - ٣- تطبيق المعرفة الجيولوجية في حل المشكلات البيئية والصناعية
- ٤- استخدام التقنيات الحديثة في البحث الجيولوجي

ب. الاهداف المهاراتية

١ - مهارات العمل الميداني والمسوحات الجيولوجية

- ٢- مهارات التحليل المخبري والتقنى
- ٣- مهارات حل المشكلات واتخاذ القرار
- ٤- مهارات التكنولوجيا الرقمية والبرمجيات الجيو لو جية

بيان نتائج التعلم:

- ١. إتقان إجراء المسوحات الجيولوجية الميدانية، بما في ذلك:
 - a. جمع العينات الصخرية والترسبات.
- b. قراءة الخرائط الطبو غرافية والجيولوجية واستخدام البوصلة
- c. توثيق الظواهر الجيولوجية (الطبقات، الفوالق، الطيات) بدقة.
 - القدرة على تحليل البيانات الميدانية وتقديم تقارير علمية واضحة.
 - a. استخدام الأجهزة المخبرية المتخصصة مثل:
- b. المجاهر البتروغرافية لتحليل الصخور والمعادن. c. أجهزة التحليل الكيميائي مثل XRF ، XRD لتحديد التركيبات
- d. تطبيق التقنيات الجيوفيزيائية (كالسونار، الجاذبية، المغناطيسية) في استكشاف الموارد الطبيعية.
 - ٣. تحليل المشكلات الجيولوجية المعقدة (مثل تلوث المياه، مخاطر الزلازل، انهيارات المنحدرات) واقتراح حلول عملية.
- a. تقييم المخاطر الجيولوجية في المشاريع الهندسية (السدود، الأنفاق، حقول النفط) باستخدام منهجيات علمية.
- اتخاذ قرارات مستنيرة في عمليات الاستكشاف والإدارة المستدامة للموارد الطبيعية.
- ٤. إتقان برامج نظم المعلومات الجغرافية (GIS) والاستشعار عن بُعد لتحليل البيانات المكانية
 - a. استخدام البرامج الجيولوجية المتخصصة مثل RockWorks 'Surfer 'Petrel لنمذجة الطبقات الجيولوجية وتخزين البيانات.
 - تحليل البيانات الإحصائية والجيولوجية باستخدام أدوات مثل Pythonأو MATLABحسب متطلبات البرنامج

ج. الاهداف الوجدانية والقيمية

بيان نتائج التعلم:

- غرس الشعور بالمسؤولية تجاه الحفاظ على الموارد الطبيعية (المياه، النفط، المعادن) واستدامتها للأجيال القادمة.
- تعميق الفهم بأهمية التوازن البيئي ودور الجيولوجي في مواجهة التحديات مثل التصحر، التلوث، وتغير المناخ.
- تطبيق مبادئ النزاهة والدقة في جمع البيانات الجيولوجية وتحليلها (مثل عدم تزوير العينات أو النتائج).
- احترام قواعد السلامة الميدانية والمخبرية، وحماية الزملاء والمجتمع من المخاطر المحتملة
- الالتزام بمعايير الشفافية في تقارير تقييم الموارد الطبيعية (خاصة في قطاع النفط والتعدين).

١- تعزيز الوعي البيئي والمسؤولية تجاه الموارد ١١-١١٠ من تجاه الموارد

- ٢- الالتزام بأخلاقيات المهنة العلمية والعملية
- ٣- تعزيز روح العمل الجماعي والقيادة المسؤولة
- ٤- الانتماء الوطني والإسهام في التنمية المستدامة

٩ استراتيجيات التعليم والتعلم

تنفذ برامج الجيولوجيا في الجامعات عادة بتبني استراتيجيات وطرائق تعليمية متعددة لضمان فعالية العملية التعليمية وتحقيق أهداف التعلم. من بين هذه الاستراتيجيات والطرائق:

- 1. المحاضرات التفاعلية :تتيح المحاضرات التفاعلية للطلاب المشاركة الفعالة في العملية التعليمية من خلال النقاشات والتبادلات مع المدرس وبين الطلاب أنفسهم. يتم توجيه الطلاب لطرح الأسئلة والمشاركة في حل المشكلات المعقدة.
- الدروس العملية والمختبرية أيتم تنظيم جلسات عملية في المختبرات والميدان لتعزيز الفهم العملي للمفاهيم الجيولوجية، حيث يتمكن الطلاب من التفاعل مع العينات الجيولوجية والبيانات الجيوفيزيائية.
- ٣. الدراسات الحالة والمشاريع البحثية :توفر الدراسات الحالة والمشاريع البحثية للطلاب فرصة لتطبيق المفاهيم النظرية على حالات واقعية، مما يعزز فهمهم للتحديات الجيولوجية وتطوير مهاراتهم في البحث والتحليل.
- إلاستخدام الفعّال للتكنولوجيا في التعليم: يتضمن ذلك استخدام الوسائط المتعددة مثل الفيديوهات التعليمية والمحاكاة الحاسوبية وبرامج الجيوماتكس لتوفير تجارب تعلم تفاعلية وشيقة.
 - المناقشات والورش العملية : يتم تنظيم جلسات مناقشة وورش عمل حيث يتمكن الطلاب من تبادل الأفكار والأراء وحل المشكلات الجيولوجية المعقدة معًا، مما يساعدهم على بناء مهارات التفكير النقدي وحل المشكلات.
 - التقييم التشخيصي والتفاعلي: يتم تطبيق أساليب التقييم التشخيصي المستمرة لقياس تقدم الطلاب وفهمهم، مع توفير ردود فعل بناءة تساعدهم على تحسين أدائهم وتعزيز فهمهم.
 - التعلم التعاوني :يشجع هذا النوع من التعلم على التعاون بين الطلاب في مجموعات صغيرة لحل المشكلات وإكمال المشاريع، مما يعزز التفاعل الاجتماعي ويعزز الفهم المتبادل للمواد الدراسية.

١٠. طرائق التقييم

ادناه بعض الطرق المشتركة للتقييم وتنفيذها في جميع مراحل برنامج الجيولوجيا بشكل عام:

- التقييم التشخيصي:
- يتم استخدام هذا النوع من التقييم في المرحلة الأولية لتحديد مستوى المعرفة والمهارات لدى الطلاب قبل بدء الدراسة.
 - يشمل التقييم التشخيصي اختبارات قصيرة وأسئلة استبيانية ومقابلات شخصية.
 - التقييم الشكلي:
- يتم تنفيذ التقييم الشكلي خلال فترات محددة خلال الفصل الدراسي، ويهدف إلى تقييم تقدم الطلاب في المواد المختلفة.
 - ب يشمل هذا النوع من التقييم الاختبارات والواجبات والمشاريع القصيرة.
 - ٣. التقييم المتواصل:
 - يتم تنفيذ التقييم المتواصل على مدار الفصل الدراسي بشكل مستمر لتقدير تطور الطلاب في الفهم والمهارات.
- يتضمن هذا النوع من التقييم مشاركة الطلاب في النّقاشات الصفية، والأنشطة الجماعية، وتّقديم التقارير، والمشاريع الفصلية
 - ٤. التقييم النهائي:
- · يتم تنفيذ التقييم النهائي في نهاية الفصل الدراسي أو في نهاية الوحدة الدراسية، ويهدف إلى تقييم الفهم الشامل للمواد.
 - يشمل هذا النوع من التقييم الاختبارات النهائية والمشاريع الكبيرة والأبحاث المنفردة.
 - التقييم الذاتي:
 - · يشَّجع التقييم الذاتي الطلاب على تقييم أدائهم وفهمهم للمواد، ويمكن أن يكون جزءًا من عملية التقييم المستمر.
- يمكن للطلاب استخدام مفاهيم مثل الملاحظة الذاتية وتقديم التقارير الشخصية لتقييم تقدمهم وتحديد نقاط القوة والضعف.
 - التقييم بالمشاركة:

- يتضمن التقييم بالمشاركة تقييم أداء الطلاب خلال المناقشات الصفية والورش العمل والمشاريع الجماعية.
 يركز هذا النوع من التقييم على مستوى المشاركة والتفاعل والتعاون بين الطلاب.

١٢. التطوير المهني

توجيه اعضاء هيئة التدريس الجدد

عملية توجيه أعضاء هيئة التدريس الجدد والزائرين والمتفرغين وغير المتفرغين على مستوى المؤسسة والقسم تشمل الخطوات التالية بإيجاز: ١. توفير التعريف بالمؤسسة والقسم :يتم تقديم مقدمة شاملة حول المؤسسة وبيئتها التعليمية وأهدافها وقيمها المؤسسية، بالإضافة إلى

- توضيح دور القسم في تحقيق هذه الأهداف.
- ٢. توجيه حول السياسات والإجراءات :يتم شرح السياسات والإجراءات الإدارية والأكاديمية المتعلقة بالتدريس والبحث والخدمة المجتمعية، بما في ذلك إجراءات التقييم والترقيات والتعامل مع الطلاب وغيرها.
- ٣. تقديم الدعم الأكاديمي والتعليمي : يتم توفير الدعم والتوجيه حول تطوير المناهج وتصميم الدروس واستخدام التكنولوجيا التعليمية وتطبيق أساليب التدريس الحديثة.
- ٤. تعريف بالموارد المتاحة :يتم إلقاء الضوء على الموارد المتاحة لأعضاء هيئة التدريس، مثل المكتبات والمختبرات والمرافق البحثية وفرص التمويل والتدريب المستمر.
- التوجيه الاجتماعي والثقافي :يشمل ذلك توجيه حول الحياة الجامعية والثقافية والاجتماعية في المؤسسة والمجتمع المحلي، بما في ذلك
 الفعاليات الثقافية والرياضية والاجتماعية.
 - توفير فرص التواصل والشبكات الاجتماعية :يشجع على بناء شبكات التواصل والتعاون بين أعضاء هيئة التدريس الجدد والحاليين
 والطلاب والموظفين الإداريين لتعزيز التواصل وتبادل الخبرات.

التطوير المهنى لأعضاء هيئة التدريس

خطة وترتيبات التطوير الأكاديمي والمهني لأعضاء هيئة التدريس تتضمن العديد من العناصر الرئيسية:

- ١. تقديم ورش عمل ودورات تدريبية :يتم تنظيم ورش عمل ودورات تدريبية تهدف إلى تطوير مهارات أعضاء هيئة التدريس في مجالات التدريس والتعلم الحديثة، مثل تكنولوجيا التعليم وتقنيات التقويم والتدريس النشط.
- التوجيه الفردي والمراجعة النقدية :يتم تقديم جلسات توجيه فردية ومراجعة نقدية لأداء أعضاء هيئة التدريس مع مراعاة تطوير نقاط
 القوة ومعالجة الضعف وتحديد فرص التحسين.
- ٣. المشاركة في مؤتمرات وندوات : يشجع أعضاء هيئة التدريس على المشاركة في المؤتمرات وورش العمل والندوات المحلية والدولية
 لتبادل الخبرات والأفكار والاستفادة من التجارب الجديدة.
- ٤. البحث والنشر العلمي : يتم تشجيع أعضاء هيئة التدريس على الاستمرار في البحث العلمي ونشر النتائج في المجلات العلمية المحكمة،
 مما يعزز تطوير هم المهني ويساهم في رفع مستوى التعليم.
 - المشاركة في أنشطة الخدمة المجتمعية : يُشجع أعضاء هيئة التدريس على المشاركة في أنشطة الخدمة المجتمعية والتعاون مع المؤسسات الخارجية، مما يساهم في توسيع دائرة تأثير هم وتعزيز تطوير هم المهنى.
- التقييم المستمر والتغذية الراجعة :يتم تقديم تقييم مستمر لأداء أعضاء هيئة التدريس مع تقديم التغذية الراجعة بانتظام لمساعدتهم على
 تحسين أدائهم وتطوير مهاراتهم.
- ٧. توفير الدعم الفني والاستشاري : يتم توفير الدعم الفني والاستشاري لأعضاء هيئة التدريس في مجالات مختلفة مثل التصميم التعليمي
 وتطوير المناهج واستخدام التكنولوجيا في التعليم.

١٣. معيار القبول

معيار القبول في الكلية يتضمن عادة مجموعة من الأنظمة والإجراءات المتعلقة بالتقديم والالتحاق:

- 1. المتطلبات الأكاديمية :تشمل هذه المتطلبات المؤهلات الأكاديمية اللازمة للالتحاق بالكلية، مثل الشهادة الثانوية أو ما يعادلها، والنتائج الأكاديمية السابقة.
- النموذج الطلابي :يجب على المتقدمين تقديم نموذج طلابي يتضمن المعلومات الشخصية والأكاديمية وأي معلومات إضافية مطلوبة.
 - ٣. المعايير الصحية والسلوكية :قد تشمل القواعد المدرسية أو الجامعية معايير صحية وسلوكية يجب على المتقدمين الالتزام بها.
 - ٤. المواعيد النهائية للتقديم :تحدد المؤسسة أو الكلية مواعيد نهائية لتقديم طلبات الالتحاق، ويجب على المتقدمين الالتزام بها.
- الرسوم الدراسية والمساعدات المالية : يتعين على المتقدمين فهم الرسوم الدراسية والخيارات المتاحة للمساعدات المالية أو القروض الدراسية.

١٤. اهم مصادر المعلومات عن البرنامج

أهم مصادر المعلومات حول البرنامج الأكاديمي في قسم الجيولوجي بكلية العلوم في جامعة بغداد تشمل:

- ١. الموقع الإلكتروني للجامعة:
- يوفر موقع الجامعة معلومات شاملة حول البرامج الأكاديمية المتاحة والمتطلبات اللازمة للتقديم والالتحاق بكلية العلوم، بما في ذلك الجيولوجيا.
 - ٢. موقع الكلية على الإنترنت:
- يحتوي موقع الكلية على معلومات مفصلة حول برنامج الجيولوجيا، مثل الخطط الدراسية، والمتطلبات، والمساقات المقدمة.
 - ٣. كتيب البرنامج الأكاديمي:
 - يتم توفير كتيب البرنامج الأكاديمي للجيولوجيا، الذي يحتوي على معلومات تفصيلية حول المناهج والمتطلبات والفرص الأكاديمية.
 - ٤. زيارة الحرم الجامعي:
 - يمكن للطلاب المهتمين بالالتحاق ببرنامج الجيولوجيا زيارة الحرم الجامعي والتحدث مع مسؤولي القسم وأعضاء هيئة التدريس والطلاب الحاليين للحصول على معلومات إضافية.
 - التواصل المباشر:
 - يمكن للطلاب التواصل المباشر مع إدارة القسم أو المستشارين الأكاديميين لطلب المعلومات الإضافية والإجابة عن الاستفسارات.
 - ٦. المواقع الاجتماعية:
 - قد يوفر حسابات وسائل التواصل الاجتماعي للجامعة أو الكلية معلومات مفيدة وآراء للطلاب الحالبين حول البرنامج الأكاديمي.
 - ٧. المنتدبات الطلابية:
 - يمكن للطلاب البحث في المنتديات الطلابية عبر الإنترنت للحصول على تجارب وآراء الطلاب السابقين والحاليين حول برنامج الجيولوجيا.

١٥. خطة تطوير البرنامج

7 . 11

أن يكون قسم الجيولوجي رائدًا في مجال تعليم وبحث الجيولوجيا على المستوى الوطني والإقليمي، وأن يساهم في تخريج خريجين متميزين يسهمون في تطوير مجتمعنا وفهم العالم الطبيعي.

الأهداف:

- تحدیث المناهج الدر اسیة:
- مراجعة وتحديث المناهج الدراسية لتواكب التطورات العلمية والتكنولوجية في مجال الجيولوجيا.
 - إضافة مواد دراسية جديدة تعكس التحديات والاحتياجات الحالية في مجال الجيولوجيا.
 - ٢. تعزيز التجارب العملية:
- · توفير المزيد من الفرص للتعلم العملي من خلال رحلات ميدانية، وورش عمل، وتجارب مختبرية متقدمة.
 - الاستثمار في تقنيات الواقع الافتراضي والواقع المعزز لتعزيز تجربة التعلم.
 - ٣. تعزيز البحث العلمي:
 - · توفير الدَّعم المالي والموارد للبحوث العلمية في مجالات الجيولوجيا المختلفة.
- · تشجيع أعضاء هيئة التدريس والطلاب على المشاركة في المؤتمرات ونشر الأبحاث في المجلات العلمية.
 - ٤. تعزيز التواصل مع الصناعة:
 - تطوير شراكات مع شركات ومؤسسات القطاع الخاص لتوفير فرص تدريب وتوظيف للطلاب.
 - · تنظيم ندوات وورش عمل بالتعاون مع الصناعة لتبادل المعرفة وتعزيز التواصل.
 - ٥. تطوير المهارات الشخصية والاجتماعية:
 - توفير برامج تدريبية تهدف إلى تطوير المهارات الشخصية مثل القيادة والاتصال وحل المشكلات.
 - تعزيز العمل الجماعي والتفاعل الاجتماعي من خلال مشاريع تعاونية وأنشطة ثقافية واجتماعية.

الإجراءات المقترحة:

- انشاء لجنة تطوير أكاديمي مكلفة بتنفيذ الخطة ومتابعة التقدم.
- ٢. تشكيل فرق عمل متخصصة لتحديث المناهج وتقديم التوصيات.
- ٣. توفير التدريب المستمر لأعضاء هيئة التدريس حول أحدث الأساليب التعليمية والبحثية.
 - إطلاق حملات تسويقية لجذب الطلاب الموهوبين والمهتمين بالجيولوجيا.
- و. توفير برامج دعم أكاديمي للطلاب لتعزيز نجاحهم الأكاديمي ومساعدتهم في تحقيق أهدافهم المهنية

	Learning and Teaching Strategies استراتيجيات التعلم والتعليم
Strategies	 Y. Fieldwork and Hands-on Experience. Hands-on experience allows students to develop observational skills, make connections between theoretical concepts and real-world examples, and enhance their understanding of stratigraphic principles. Y. Visual Aids: Utilize visual aids, such as diagrams, charts, maps, and photographs, to help students visualize and comprehend stratigraphic concepts. Use geological maps to demonstrate the distribution and relationships between different rock units and incorporate stratigraphic columns to illustrate the vertical succession of strata. Y. Virtual Resources: Take advantage of virtual resources, such as interactive online modules, virtual field trips, and digital simulations. These resources can provide students with immersive experiences, allowing them to explore stratigraphic principles and study geological features virtually. Case Studies and Real-life Examples Laboratory Work: Conduct laboratory exercises that involve the description and interpretation of rock samples, including the identification of lithology, sedimentary structures, and fossil content. Encourage students to create stratigraphic logs or cross-sections based on the laboratory data, promoting critical thinking. Collaborative Learning: Foster collaborative learning environments where students can work in groups or pairs to solve problems, analyze data, or interpret stratigraphic information. This approach encourages active engagement, promotes discussions, and allows students to learn from one another's perspectives and insights. Multimedia Resources: Incorporate multimedia resources, such as videos, animations, and online lectures, to supplement traditional teaching methods. Multimedia resources can help reinforce key concepts, illustrate geological processes, and provide additional visual and auditory learning opportunities. Continuous Assessment and Feedback: Implement regular assessments,

such as quizzes, assignments, or class discussions, to gauge student understanding and provide timely feedback. This allows students to monitor their progress, identify areas of improvement, and reinforces learning.

Module Aims اهداف المادة الدراسية	 Provide students with a comprehensive understanding of the fundamental principles underlying volumetric analysis and quantitative analysis methods. As well as general knowledge in bath Organic Chemistry and Biochemistry. Develop specialists in the field of general chemistry and its practical applications, preparing them to fulfill the country's developmental and industrial needs. Foster a scientifically literate generation that recognizes the value of science as a catalyst for transformative change. This includes cultivating critical thinking skills, promoting analytical thinking, and facilitating adaptability to evolving technologies and societal demands. Strengthen the connection between the university and society by offering advisory counseling, training programs, and professional development opportunities for faculty and staff, ensuring that academic knowledge is effectively applied to real-world contexts. Contribute to the country's overall progress by producing chemistry graduates who possess the skills and knowledge to actively contribute to its development. 						
	19						

	 Address the increasing demand for highly qualified professionals in various sectors that require specialized expertise in chemistry. Encourage exceptional students to serve as teaching assistants within the department, nurturing their potential to become future members of the academic teaching staff and fostering the growth of a knowledgeable and skilled workforce
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	A. Cognitive goals 1 Introduce students to the fundamental principles of volumetric analysis and quantitative analysis methods, establishing a solid foundation in the field. 7 Foster an understanding of the theoretical principles and practical applications of titration, enabling students to detect both inorganic and organic compounds effectively. 7 Provide students with a comprehensive knowledge of volumetric analysis, with a specific focus on titration, and its extensive range of applications in various scientific disciplines. 2 Provide students knowledge of definition of organic chemistry, the classification of organic compounds, how to distinguish between them, and a method. As well as how given the name to organic compound. 9 Provide students' knowledge of biochemistry, the basic elements of life, and the structure and components of a cell.as well as the types of carbohydrates, fats, proteins and nucleic acids. A. The skills goals special to the program 1 Enhance students' research skills by encouraging them to engage in scientific exploration and facilitating constructive discussions where informed opinions are shared. 7 Develop proficiency in the use and development of laboratory techniques and equipment, enabling students to conduct experiments effectively and obtain accurate results. 7 Cultivate critical thinking skills that allow students to analyze and solve scientific problems related to the laws of chemistry, promoting a deeper understanding of the subject. 4 Foster the development of practical skills and the ability to apply theoretical and empirical scientific knowledge gained through their studies in real-life situations, taking into account industrial and commercial constraints.
Indicative Contents المحتويات الإرشادية	- The course aims to provide students with a comprehensive understanding of classical titration methods in analytical chemistry. It covers the fundamental principles of acid/base titration, complexometric titration, redox titration, and precipitation titration. Students will delve into the theory behind these methods and explore their wide-ranging applications. In addition to theoretical knowledge, the course emphasizes practical skills. Students will learn how to calculate pH values for various acids, bases, salts, and buffers, enabling them to make accurate determinations in real-world scenarios. They will also develop the ability to evaluate and interpret the results obtained from titration experiments, enhancing their analytical capabilities. Throughout the course, selected classical quantitative analytical methods will be highlighted, giving students a deeper understanding of their importance and practical use. By the end of the course, students will have gained the necessary knowledge and skills to apply classical titration methods effectively in analytical chemistry, both in theory and practice.

	Learning and Teaching Strategies استراتیجیات التعلم والتعلیم						
Stra	- The module will be conducted using a student-centered approach, placing emphasis on active participation and the cultivation of critical thinking skills. Through a combination of classes, interactive tutorials, and purposeful experiments, students will be actively engaged in the learning process, fostering the development of their critical thinking abilities. The aim is to create an interactive and dynamic learning environment that encourages students to actively participate, think critically, and attain a profound comprehension of the subject matter. By adopting this strategy, students will have the opportunity to apply their knowledge, engage in analytical discussions, and enhance their overall learning experience.

Мо	dule Aims, Learning Outcome نِتائج التعلم والمحتويات الارشادية	اهداف المادة الدراسية و					
Module Aims اهداف المادة الدراسية	 This course deals with the basic concept of human rights& democracy Clarifying and training students on the most important principles of human rights and democracy. Organizing discussions and presentations on the most vital and basic topics affecting community building, related to human rights and democracy Adopting teamwork with students to develop their cognitive abilities and create a spirit of cooperation, initiative, creativity and exchange of views in an effort to build the foundations of peaceful community coexistence. Providing society with conscious youth aware of the importance of its role in building society, its unity and cohesion through spreading the culture of human rights and establishing the rules of correct democracy. Human rights guarantee the protection and respect of an individual's interests, even when he or she is not a majority. In a democratic climate, sustainable democratic power cannot be conceived without respecting, protecting and fulfilling human rights. Through their combined influence, they allow the individual a life based on the freedom of self-determination and collective. That is why the protection and realization 						

	of human rights truly form the basis of the democratic project.			
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	Cognitive goals. 1. Educate students and inform them about the importance of human rights and democracy. 2. Recognize and understand the methods of teamwork for the exchange of ideas and creative discussions 3. Developing students' performance through guidance in preparing miniresearch on modern vocabulary on vital topics related to human rights and democracy. 4. Providing students with creative development abilities in modern proposals and creative developmental ideas by discussing awareness videos presented on electronic classes. 5. Developing the skills of sharing opinions and ideas and respecting others opinion. 5. Objective Skills: 7. Basic knowledge in the principles of human rights and democracy. A. Building the innovative personality of knowledge through online research and the transfer and exchange of information. 4. Discuss the various properties about everything related to human rights and their importance in our daily lives. 1. Identify everything related to democracy and the foundations of the performance of the electoral process and its importance in building the nation. 1. Identify the capacitor and inductor phasor relationship with respect to voltage and current. 1. Developing the student's analytical and critical skills regarding the			
Indicative Contents المحتويات الارشادية	reality and future of human rights and democracy. 7. Training the student on the importance of active participation in aspects of public life, such as promoting respect for the principles of public human rights and active participation in political and cultural life. 8. Enable students to understand the importance of education and its role in spreading the culture of human rights and democracy in building a civilized society based on good governance, the most important component of which is belief in human rights, education and active participation in governance through free and fair elections.			
	Learning and Teaching Strategies استراتیجیات التعلیم			
Strategies	The main strategy that will be adopted in delivering this module is to encourage students' participation in the discussions, dialogues and group work lectures & exercises, while at the same time refining and expanding their critical thinking skills. There are many teaching and learning methods used, and the most important of these methods are: Theoretical lecture, discussion and dialogue, panel discussions on certain topics, theoretical student research Library and electronic activities (which helps students to reach the following results: ¹. The scientific ability to distinguish between correct information and wrong information. ². Ease of scientific drafting and ease of correction.			

 The ability to memorize and guess. The ability to link concepts and principles with reality. 										
c. Ability to invoke, link, interpret.

Module Aims Modu					

	present time
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	 \- Gaining the ability and skill in field interpretation and deduction. \- Acquiring the skill of distinguishing between different geological features. \- Dealing with the basic laws of various earth sciences. \- Using the principle of the past is key to the present \- Field and laboratory description \- investigation and exploration \- Scientific reports
Indicative Contents المحتويات الإرشادية	 1- It includes the study of the changes that occurred on the earth's surface in terms of water distribution and land areas since its inception Earth from about 6.4 billion years ago until now. Y- Studying the Earth's relations with the solar system and the universe, as this section means by studying the effects and remnants of ancient life on Earth since the emergence of life about two billion years ago to the present time Y- Providing students with an appropriate amount of information and expertise in the field of earth science in a functional manner that contributes to their acquisition of a scientific culture and contributes to academic preparation and helps them to identify the natural resources in their country.
	Learning and Teaching Strategies استراتیجیات التعلم والتعلیم
Strategies	1- Fieldwork and Hands-on Experience. Hands-on experience allows students to develop observational skills, make connections between theoretical concepts and real-world examples, and enhance their understanding of stratigraphic principles. Y- Visual Aids: Utilize visual aids, such as diagrams, charts, maps, and photographs, to help students visualize and comprehend stratigraphic concepts. Use geological maps to demonstrate the distribution and relationships between different rock units and incorporate stratigraphic columns to illustrate the vertical succession of strata. Y- Virtual Resources: Take advantage of virtual resources, such as interactive online modules, virtual field trips, and digital simulations. These resources can provide students with immersive experiences, allowing them to explore stratigraphic principles and study geological features virtually. Laboratory Work: Conduct laboratory exercises that involve the description and interpretation of rock samples, including the identification of lithology, sedimentary structures, and fossil content. Encourage students to create stratigraphic logs or cross-sections based on the laboratory data, promoting critical thinking. Collaborative Learning: Foster collaborative learning environments where students can work in groups or pairs to solve problems, analyze data, or interpret stratigraphic information. This approach encourages active engagement, promotes discussions, and allows students to learn from one another's perspectives and insights. Multimedia Resources: Incorporate multimedia resources, such as videos, animations, and online lectures, to supplement traditional

teaching methods. Multimedia resources can help reinforce key
concepts, illustrate geological processes, and provide additional visual
and auditory learning opportunities.

Module Aims اهداف المادة الدراسية	for development and progress and capable of meeting the needs of the job				

	 and scientific methods in thinking, analysis and adaptation with the development of technologies, to keep up with the expansion of human needs. Effective contribution for deepening and documenting the connection of the university with the society through the implementation of advisory counseling, training and development of teaching and administrative staff. The service of preparing graduates specialized in physics who contribute to development in the country. Meeting the needs of various sectors with highly qualified personals in the field of physics. Encouraging the distinguished in this field to work as teaching assistants in 					
		the department to be part of the academic teaching staff in the future.				
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	 the department to be part of the deddenic teaching start in the rature. enable students to obtain knowledge and understanding of the concept of physics. Enable students to obtain knowledge and understanding of the scientific laws of physics. Enable students to keep pace with scientific development in all scientific fields of physics. 					
Indicative Contents المحتويات الارشادية	 This course contains a lot of vocabulary, which is a branch of physics concerned with the nature and properties of matter and energy. It includes an introduction to understanding natural phenomena, the forces and movement affecting their course, and the formulation of knowledge into laws that do not only explain the aforementioned processes, but also predict the course of natural processes with models that gradually approach reality. The topic of general physics includes an introduction to physics, vector analysis, Newton's laws in linear motion, circular motion, and rotational motion. Also, gravitational force, work, energy, torque, angular momentum, laws of motion with constant or uniform acceleration of linear and rotational motion, dynamic fluids, static fluids, particle stability, electric charge, electric field, and electric potential in electrical circuits and ray optics. 					
Learning and Teaching Strategies						
	استراتيجيات التعلم والتعليم					
Strategies	- The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering types of simple experiments involving some sampling activities that are interesting to the students.

	Learning and Teaching Strategies استراتيجيات التعلم والتعليم
	\. Hands-on Practice: Emphasize practical exercises and hands-on
	activities where learners actively engage with the manual solution.
	Provide step-by-step instructions and guided practice opportunities to
	ensure learners gain experience. 7. Demonstration: Start by demonstrating mathematical concepts with
	examples to show learners how to solve related tasks,
	*. Interactive Tutorials: Utilize interactive tutorials and simulations that
	allow learners to interact in a simulated environment. These resources
	provide guided instructions and immediate feedback, enabling learners to practice and reinforce their skills.
	4. Scenario-based Learning: Present real-life scenarios where learners can
	apply their knowledge to solve problems or complete specific tasks.
	Encourage critical thinking and problem-solving skills by challenging
a	learners to find solutions using the various mathematical concepts they have learned.
Strategies	Group Activities and Discussions: Foster collaboration and peer
	learning by incorporating group activities and discussions. Encourage
	learners to share their experiences, ask questions, and help each other troubleshoot issues or explore advanced features.
	7. Multimedia Resources: Supplement traditional instruction with
	multimedia resources such as video tutorials, interactive e-learning
	modules, and online resources. These resources can provide additional
	explanations, demonstrations, and visual aids to enhance understanding and retention of the content.
	V. Practice Projects and Assignments: Assign practical projects or
	assignments that require learners to apply their skills to create
	documents, presentations, or other tasks. Provide clear objectives and
	guidelines, and encourage creativity to promote active learning. ^. Assessments and Feedback: Use formative and summative assessments
	to gauge learners' understanding and progress. Provide constructive

feedback on their work to highlight areas for improvement an	d
reinforce correct practices.	

4. Adaptability and Differentiation: Recognize the diverse needs and learning styles of learners and adapt the instruction accordingly. Provide differentiated instruction, additional resources, or alternative learning paths to cater to individual learners' abilities and preferences.

Module Aims اهداف المادة الدراسية	 This module on individual projects and provides the students more information about the main phylum of animals. Training the student to understand the shapes, modes of preservation, classification, nomenclature of species and genera. 								
Module Learning	Module Learning \(\). beneficialness the specifying geological time then educing the paleo								

0-4	
Outcomes مخرجات التعلم للمادة	environment. 7. Acquiring the skill of distinguishing between different geological formations.
مخرجات التعلم للمادة الدراسية	7. Dealing with the basic laws of various earth sciences.
	4. Using the principle of the past as a key to the present in reconstructing the
	geological history of the earth's formation and development.
	\. Invertebrate Fossils is a branch of Geology which deals with an animal
	without a backbone. In fact, invertebrates don't have any any bones at all!
	Invertebrates that you may be familiar with include spiders, worms, snails,
	lobsters, crabs and insects like butterflies. However, humans and other
	animals with backbones are vertebrates. It focuses primarily on stratified
	phylum of animals that includes types of marine organisms & Mode of life
	[15 hrs]
	7. The principles on which the Invertebrate Fossils studies are based include
	order variety phylum of animals, [15 hrs].
	r. an organism must be an animal to be classified as an invertebrate, meaning
Indicative Contents	they are members of the kingdom Animalia. [15 hrs].
المحتويات الارشادية	£. the species in question must lack a notochord during embryonic development
	and a backbone, also called a spine, and a spinal cord.
	•. The majority of living animals are invertebrates. Invertebrates lack a
	backbone. [15 hrs].
	7. Invertebrates may have an incomplete or a complete digestive system.
	V. Invertebrates vary in how they move and in the complexity of their nervous
	system. And Most invertebrates reproduce sexually. [15 hrs].
	^. They bring beauty into our lives, ensure we have food on our plates, and are
	at the heart of a healthy environment. The services they perform—
	pollinating, dispersing seeds, becoming food for wildlife, recycling nutrients,
	cleaning water, building reefs—are critical to life on our planet. Learning and Teaching Strategies
	استراتيجيات التعلم والتعليم
	\(\text{. Hands-on Experience: Hands-on experience allows students to develop } \)
	observational skills, make connections between theoretical concepts and real-
	world examples, and enhance their understanding of stratigraphic principles.
	7. Visual Aids: Utilize visual aids, such as diagrams, charts, maps, and
	photographs, to help students visualize and comprehend stratigraphic
	concepts.
	r. Virtual Resources: Take advantage of virtual resources, such as interactive
	online modules. These resources can provide students with immersive
	experiences, allowing them to explore stratigraphic principles and study
	geological features virtually.
Strategies	4. Case Studies and Real-life Examples: Present case studies and real-life
	examples that illustrate the application of stratigraphic principles in various
	contexts, such as paleoenvironmental reconstructions, or geological hazard
	assessments. These examples can help students understand the practical
	significance of the course. •. Laboratory Work: Conduct laboratory exercises that involve the description
	and interpretation of samples. Encourage students to the laboratory data.
	7. Collaborative Learning: Foster collaborative learning environments where
	students can work in groups or pairs to solve problems, analyze data. This
	approach encourages active engagement, promotes discussions, and allows
	students to learn from one another's perspectives and insights.
	V. Multimedia Resources: Incorporate multimedia resources, such as videos,
	57

- animations, and online lectures, to supplement traditional teaching methods. Multimedia resources can help reinforce key concepts.
- **^.** Allows students to monitor their progress, identify areas of improvement, and reinforces learning.
- 4. Integration of Technology: Utilize geospatial software, stratigraphic modeling tools, and other technology-based resources to enhance the learning experience.

 The primary goal of structural geology is to use measurements of present-day rock geometries to uncover information about the history of deformation (strain) in the rocks, and ultimately, to understand the stress field that resulted in the observed strain and geometries. Also to understand the structural evolution of a particular area due to plate tectonics. Understanding of the structure (geometry) of the underlying rocks is vitally important in the mining and petroleum industries. Recognize, classify, measure, record and analyze geological structures at a variety of scales and represent them in field note books and upon geological 				to plate s vitally res at a	
maps, sections and stereograms. Understand and describe the features formed in rocks when subject to stress, analyze the strain in these rocks and interpret the Paleostress field that affected the rock and caused the deformation know the brittle, ductile and plastic deformation understand deformation mechanisms at micro- and macro-scales describe the geometry and properties of different deformation structures					hat affected

Contents	 run structural fieldwork and use structural field data in geometrical and kinematic analyses Visualize and interpret structural observations and measurements. An understanding of stress and its origins within the lithosphere. An understanding of strain as it relates to naturally occurring deformation. To observe deformed rocks and find an explanation for how and why they ended up in their present state. To understand under which physical condition the rock was formed and how the structures were made. Small models are being demonstrated how stress, strain, temperature, and pressure worked. Learning and Teaching Strategies						
Strategies	 Inquiry-based learning, where students explore a question or problem through observation, experimentation, or data analysis. Peer instruction, where students answer questions and explain their reasoning. Cooperative learning, which has students work in small groups to complete a task. During class time, interactive activities, discussions are used.

Prerequisite modul	UOB-112	Semester	One
Co-requisites modu	None	Semester	
	Module Aims, Learning Outcomes and Indicative Con اهداف المادة الدراسية ونتائج التعلم والمحتويات الارشادية	tents	
Module Aims اهداف المادة الدراسية	 Y- To build upon the foundational English skills according on scientific contexts. Y- To improve students' ability to read and comprese. Y- To enhance writing skills for scientific reports, suggested to develop effective oral communication skills for discussions. 	nend scientific t immaries, and e r presentations	exts.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	 ** To expand vocabulary, including scientific termi ** Scientific Vocabulary Proficiency * Students will acquire and effectively use scientific their specific disciplines (e.g., biology, chemistry, * Measurement: Assessed through vocabulary quitoral presentations. * Improved Reading Comprehension of Scientific Texts * Students will be able to comprehend and critical research papers, and textbooks written in Englis * Measurement: Assessed through reading compressummaries, and analysis tasks. * Effective Scientific Writing Skills * Students will develop the ability to write clear, st scientific reports, essays, and research papers in * Measurement: Assessed through writing assignmaresearch summaries, and essays that adhere to ach Development of Listening Skills in Scientific Contexts * Students will improve their ability to understand contexts, including lectures, discussions, and multiple multiple material sections on relevant topics * Students will be able to deliver structured, conficusion in Science * Students will be able to deliver structured, conficusion in Sciencial Communication in Science * Students will demonstrate critical thinking skills and discussing scientific data and literature in Endicates on scientific issues. * Enhanced Critical Thinking and Problem-Solving * Students will demonstrate critical thinking skills and discussing scientific data and literature in Endicated the science of the scien	e vocabulary religions, scientific relations and content ased on scientific relations, group discuby analyzing, in aglish. se, critical reviewings. e joint projects, ne medium of	eports, and tific articles, es, article oncise o reports, rds. in scientific t. ic podcasts, tations on r English. ssions, and oterpreting, vs, and
	 Measurement: Assessed through group work and such as co-written reports or group presentation. Understanding of Cross-Cultural Communication in Students will develop an understanding of the ro 	s on scientific to Science	pics.

_		
		language in science, enhancing their ability to communicate in international academic and professional settings. • Measurement: Assessed through participation in discussions about global scientific research, cultural contexts of science, and attending (or simulating) scientific conferences in English. 9. Use of Technology for Language Learning and Research • Students will utilize digital tools and online resources effectively for language development and scientific research in English. • Measurement: Assessed through assignments that require students to use scientific databases, online journals, or language learning platforms. 10. Academic Integrity and Ethical Communication • Students will understand and apply academic integrity principles, including proper citation and avoidance of plagiarism in English-language scientific writing. • Measurement: Assessed through written assignments that require proper citation of sources and adherence to academic writing standards.
		1.Vocabulary and Terminology
		 Focus: Introducing and practicing essential scientific vocabulary relevant to various disciplines (biology, chemistry, physics, etc.). Content: Word formation, use of prefixes/suffixes in scientific terms, and discipline-specific glossaries. Reading and Analyzing Scientific Texts Focus: Developing strategies for reading comprehension and analysis of
		 Scientific literature. Content: Skimming and scanning techniques, identifying main ideas and supporting details, and critical analysis of journal articles and research papers.
	Indicative Contents	3. Writing and Structure
	المحتويات الارشادية	Focus: Teaching the principles of scientific writing with emphasis on clarity, precision, and structure.
		Content: Writing lab reports, abstracts, research papers, and scientific essays, including sections like introductions, methods, results, and discussions.
		4. Listening to Scientific Content
		 Focus: Enhancing listening skills through exposure to scientific lectures, podcasts, and discussions. Content: Listening exercises based on TED talks, scientific seminars, and
		interviews with scientists, focusing on note-taking and extracting key information.
		5. Oral Presentation Skills
41		72

	 Focus: Training students in delivering presentations on scientific topics using clear and professional English. Content: Presentation techniques, using visual aids (PowerPoint, posters), others tolks, and handling O & A aggicing
	structuring talks, and handling Q&A sessions.
	Learning and Teaching Strategies استراتيجيات التعلم والتعليم
	1. Tailored Curriculum
	Contextualization: Focus on scientific English, incorporating vocabulary and structures relevant to their field of study.
	Integrating Language and Content: Combine English learning with scientific content to enhance both language and discipline-specific knowledge.
	2. Communicative Language Teaching (CLT)
	Emphasis on Interaction: Encourage students to communicate in English, using real-life scenarios like presentations, lab reports, and scientific discussions.
	Speaking and Listening Skills: Engage students in group discussions, debates, and role-plays about scientific topics.
	3. Task-Based Learning (TBL)
Strategies	Practical Assignments: Use tasks such as writing abstracts, summaries of scientific articles, or conducting experiments and presenting results in English.
birategies	• Problem-Solving Activities: Organize problem-based learning activities that require students to work in English, fostering collaboration and language use in context.
	4. Collaborative Learning
	Group Projects: Encourage group work on projects like poster presentations or scientific writing tasks, promoting teamwork and communication skills.
	Peer Learning: Facilitate peer review sessions where students critique each other's work, fostering critical thinking and language practice.
	5. Scaffolded Learning
	Gradual Progression: Break down complex scientific texts and language into smaller, manageable units, providing step-by-step support.
	Use of Visual Aids: Incorporate diagrams, charts, and visuals to simplify complex ideas and help students grasp scientific concepts in English.
	6. Use of Technology

- Language Learning Apps: Encourage the use of apps that focus on vocabulary building, grammar, and listening comprehension.
- Online Resources: Use online journals, podcasts, and videos related to science topics for listening practice and expanding scientific vocabulary.

7. Writing Skill Development

- Scientific Writing Focus: Teach students how to write lab reports, research papers, and scientific essays with correct structure and academic language.
- Drafting and Revising: Implement processes of drafting, peer feedback, and revision to help students improve their academic writing.

8. Assessment and Feedback

- Formative Assessment: Use quizzes, oral presentations, and written assignments to assess language development continuously.
- Feedback Focus: Provide detailed feedback on language use, especially on scientific terminology, grammar, and coherence in writing.

9. Motivation and Engagement

- Relating to Students' Interests: Use content that is interesting and relevant to science students, such as scientific discoveries, experiments, or technology updates.
- Gamification: Incorporate games and quizzes on scientific vocabulary and language skills to make learning more engaging.

10. Cultural Awareness and Communication

• Cross-Cultural Communication: Teach students the importance of English as a global language in science and technology, highlighting its use in international research and conferences.

Understanding Contexts: Encourage discussions on scientific breakthroughs in English-speaking countries to provide cultural and contextual language learning.

r an organism must be an animal to be classified as an invertebrate, meaning they are members of the kingdom Animalia. [15 hrs]. f. the species in question must lack a notochord during embryonic development and a backbone, also called a spine, and a spinal cord. • The majority of living animals are invertebrates. Invertebrates lack a backbone. [15 hrs]. 1. Invertebrates may have an incomplete or a complete digestive system. V. Invertebrates vary in how they move and in the complexity of their nervous system. And Most invertebrates reproduce sexually. [15 hrs]. A. They bring beauty into our lives, ensure we have food on our plates, and are at the heart of a healthy environment. The services they perform—pollinating, dispersing seeds, becoming food for wildlife, recycling nutrients, cleaning water, building reefs—are critical to life on our planet. **Learning and Teaching Strategies** استراتيجيات التعلم والتعليم \(\) Hands-on Experience: Hands-on experience allows students to develop observational skills, make connections between theoretical concepts and realworld examples, and enhance their understanding of stratigraphic principles. Y. Visual Aids: Utilize visual aids, such as diagrams, charts, maps, and photographs, to help students visualize and comprehend stratigraphic concepts. r. Virtual Resources: Take advantage of virtual resources, such as interactive online modules. These resources can provide students with immersive experiences, allowing them to explore stratigraphic principles and study geological features virtually. **Case Studies and Real-life Examples: Present case studies and real-life examples** that illustrate the application of stratigraphic principles in various contexts, such as paleoenvironmental reconstructions, or geological hazard assessments. These examples can help students understand the practical significance of the course. **Strategies** Laboratory Work: Conduct laboratory exercises that involve the description and interpretation of samples. Encourage students to the laboratory data. 1. Collaborative Learning: Foster collaborative learning environments where students can work in groups or pairs to solve problems, analyze data. This approach encourages active engagement, promotes discussions, and allows students to learn from one another's perspectives and insights. V. Multimedia Resources: Incorporate multimedia resources, such as videos, animations, and online lectures, to supplement traditional teaching methods. Multimedia resources can help reinforce key concepts. A. Allows students to monitor their progress, identify areas of improvement, and reinforces learning. 1 Integration of Technology: Utilize geospatial software, stratigraphic modeling tools, and other technology-based resources to enhance the learning experience Student Workload (SWL) الحمل الدراسي للطالب محسوب لـ ١٥ اسبوعا Structured SWL (h/sem) Structured SWL (h/w) 80 5 الحمل الدراسي المنتظم للطالب أسبوعيا الحمل الدراسي المنتظم للطالب خلال الفصل Unstructured SWL (h/w) **Unstructured SWL (h/sem)** 45 3 الحمل الدراسي غير المنتظم للطالب خلال الفصل الحمل الدراسى غير المنتظم للطالب أسبوعيا Total SWL (h/sem) 125 الحمل الدراسي الكلى للطالب خلال الفصل **Module Evaluation**

Module Aims اهداف المادة الدراسية	formation of these rocks in with different aspects of parent rocks . Training the student on the most important methods of determining the type of rock depending on mineralogical and textural classification , and the relationship of the rocks to each other this is the key to discovery and development of minerals resources ,and because fundamental principles			
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	learned from petrology have applications in modern industry. Acquiring the ability and skill in field interpretation and elicitation. Acquiring the skill of distinguishing between different minerals and rock tyoes. Dealing with the basic laws of various earth sciences.			

	4. Using the principle of the past as a key to the present in reconstructing the
	geological history of the earth's formation and development.
	\. Petrology is a branch of Geology which deals with the types of rocks in
	relation to the way of their formation.
	7. It focuses primarily on rocks that include igneous, sedimentary, and
	metamorphic rock. It also includes study the relationship between them
	[15 hrs]
	The principles on which the petrologic studies are based include order of
T. P. A. G. A. A.	Rock types, its classification, textural and minerals composition, [15 hrs].
Indicative Contents	4. Scientific study of rocks that deals with their composition, texture, and
المحتويات الارشادية	structure; their occurrence and distribution; and their origin in relation
	to physicochemical lconditions and geological processes [15 hrs].
	•. It is concerned with all three types of rocks –igneous, sedimentary and
	metamorphic .[15 hrs].
	7. Petrology includes the subdisciplines of experimental petrology and
	petrography experimental petrology involves the laboratory synthesis of
	rocks for the purpose of ascertaining the physical and chemical conditions
	under which rock formation occurs 15 hrs]. Learning and Teaching Strategies
	Learning and Teaching Strategies استراتيجيات التعلم والتعليم
	\(\frac{1}{2}\). Fieldwork and Hands-on Experience: Fieldwork is an essential component
	of petrology. Engage students in field trips or field-based exercises where
	they can observe and analyze rock outcrops, interpret sedimentary
	structures, and collect samples. Hands-on experience allows students to
	develop observational skills, make connections between theoretical
	concepts and real-world examples, and enhance their understanding of
	stratigraphic principles.
	Y. Visual Aids: Utilize visual aids, such as diagrams, charts, maps, and
	photographs, to help students visualize and comprehend petrology m
	concepts. Use geological maps to demonstrate the distribution and
	relationships between different rock units and incorporate stratigraphic
	columns to illustrate the vertical succession of strata.
	r. Virtual Resources: Take advantage of virtual resources, such as
	interactive online modules, virtual field trips, and digital simulations.
	These resources can provide students with immersive experiences,
Strategies	allowing them to explore stratigraphic principles and study geological
	features virtually.
	4. Case Studies and Real-life Examples: Present case studies and real-life
	examples that illustrate the application of stratigraphic principles in
	various contexts, such as oil and gas exploration, paleoenvironmental
	reconstructions, or geological hazard assessments. These examples can
	help students understand the practical significance of petrology and its
	relevance in different disciplines.
	Laboratory Work: Conduct laboratory exercises that involve the
	description and interpretation of rock samples, including the identification
	of lithology,mineralogy
	, sedimentary structures, and fossil content. Encourage students to
	determine the texture and classification of hand specimen.
	7. Collaborative Learning: Foster collaborative learning environments
	where students can work in groups . This approach encourages active
	engagement, promotes discussions, and allows students to learn from one

- another's perspectives and insights.
- V. Multimedia Resources: Incorporate multimedia resources, such as videos, animations, and online lectures, to supplement traditional teaching methods. Multimedia resources can help reinforce key concepts, illustrate geological processes, and provide additional visual and auditory learning opportunities.
- **^.** Concept Mapping: Encourage students to create charts or diagrams that depict the relationships between different petrology concepts, principles, and processes. .
- 4. Continuous Assessment and Feedback: Implement regular assessments, such as quizzes, assignments, or class discussions, to gauge student understanding and provide timely feedback. This allows students to monitor their progress, identify areas of improvement, and reinforces learning.
- \(\cdot \). Integration of Technology: Utilize geospatial software, stratigraphic modeling tools, and other technology-based resources to enhance the learning experience. These tools can facilitate data analysis, visualization, and interpretation, providing students with valuable skills applicable to the field of petrology.

M	odule Aims, Learning Outcome نِتائج التعلم والمحتويات الارشادية		ents			
 The primary goal of structural geology is to use measurements of present-day rock geometries to uncover information about the history of deformation (strain) in the rocks, and ultimately, to understand the stress field that resulted in the observed strain and geometries. Also to understand the structural evolution of a particular area due to plate tectonics. Understanding of the structure (geometry) of the underlying rocks is vitally important in the mining and petroleum industries. Recognize, classify, measure, record and analyze geological structures at a variety of scales and represent them in field note books and upon 						
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	 Understand and describe the features formed in rocks when subject to stress, analyze the strain in these rocks and interpret the Paleostress field that affected the rock and caused the deformation know the brittle, ductile and plastic deformation understand deformation mechanisms at micro- and macro-scales describe the geometry and properties of different deformation

Y. Sedimentology are among the most important branches of earth science and have important applications in many engineering and scientific fields ". Iraq has a huge amount of sediments, so students must understand and understand how to deal with sediments, the way to deal with them in geological workshops and in the field, how to make slides for these sediments and rocks, and how to study them under a polarizing microscope **Learning and Teaching Strategies** استراتيجيات التعلم والتعليم \. Training on the skills of collecting samples for sediment from the field and how to deal with them in the laboratory and geological workshop. 7. Mastering the process of preparing samples for the various types of analyses that can be conducted on sediment and sedimentary rocks. Thinking about the applications that can be made on sediments, which are **Strategies** considered one of the most important requirements of most applied research. ². Sediments have many applications, in addition to their engineering and industrial importance, as there are many of them that are considered precious stones, as well as being the basic component of many geological museums and what is known as geological parks and geoparks. Module Aims اهداف المادة الدراسية	 \. To provide students with a solid foundation in Calculus at degree level and equip them with a knowledge of the necessary methods and techniques in applied mathematics for further study. \tau\. It deals with the basic concept of functions limit, continuity, derivation and their consequences. \tau\. To develop problem solving skills and understanding of differentiation rules through the application. 						
Module Learning	1. Students will become familiar with functions and limits. They will gain an						

Outcomes نات التعلم للمادة الدراسية	of t ۲. Stu der ۳. Stu	understanding of convergence of sequences and series, and understanding of the foundations of differentiation and integration. 7. Students will be able to compute limits of sequences and series, find derivatives, integrate elementary functions. 7. Students will have enhanced skills in the following areas: modelling, spatial awareness, abstract reasoning and numeracy.
